Chattr, LLC

Our Mission

Chattr exists to provide our clients the ability to build and manage their own private social network, so they can share freely, secure in the knowledge that their confidential information will be seen only by authorized individuals.

Our Vision

To be the premier cloud-hosted, business-oriented social networking tool.

Our Core Values

Confidentiality

The privacy of a client's social network is paramount. We provide tools for clients to control access to their own social network, and guarantee against unauthorized access, both from other clients and from outside attackers.

Integrity

The integrity of a client's social network, and all data attendant, must not be compromised. Neither unauthorized users, software error, nor outside attackers can breach client data integrity.

Availability

Our client's social network must be fully operational, with no performance or data loss, for 99.99% of the time.

Scalability

Our clients grow, we grow with them. Whether a team has two members or 20,000, Chattr can support them. We leverage cloud technology so that we can grow as quickly as needed, as large as needed, with no availability compromise.
